

Exercise

You are required to design a website based on an interest or hobby of yours. The site should contain a home page and 4 additional pages. Each webpage should be linked together using the appropriate tag. All pages must be distinctively different in terms of text and images. Use all of the tags you have learned to date to complete this exercise.

- Note you should create a (root) folder named ***Hobby*** to contain the site.
- Inside this folder you should create an ***images*** folder. Download photos, etc from the web into this folder for inclusion in your site.
