## Getting started

- Download Java Development Kit – JDK (Android uses Java)
- Set your system variable to point to path containing JDK (Start - Control Panel – Advanced Settings)
- Download and install Android Studio

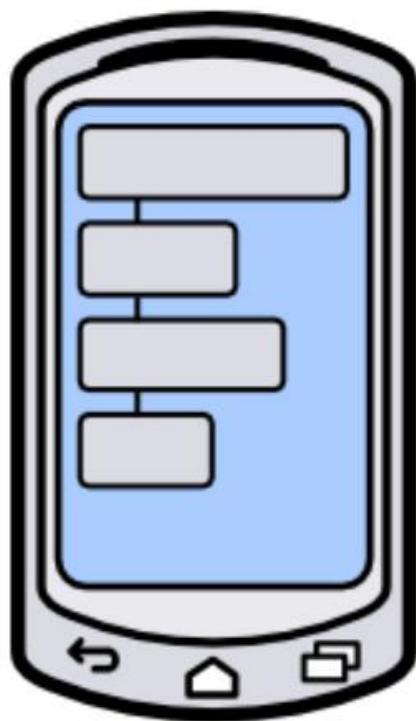

## Beginning New Project

- Sketch your app (planning and design phase is important)
- Begin Android Studio
- Think of an activity as a screen

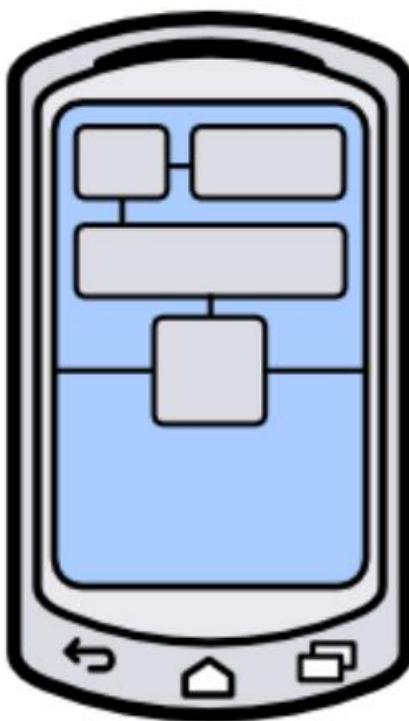

Press Tab to select predictive commands offered by IDE

Press Alt and Enter to add the relevant Import .... Commands to your source code to import the necessary classes

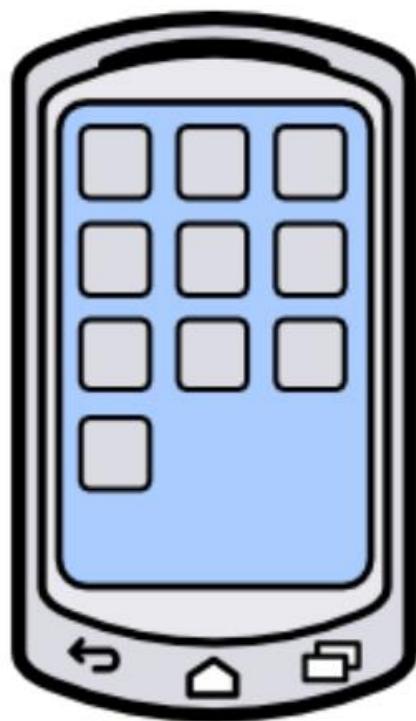

Different layout types

Linear Layout

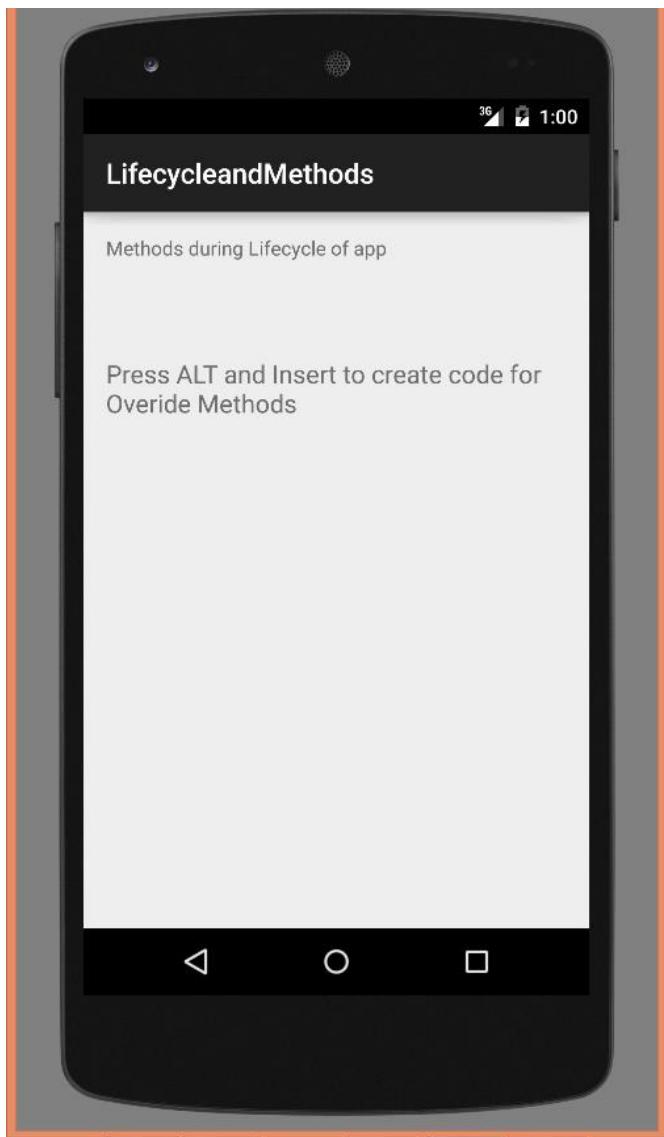

Relative Layout

List/Grid Layout

## Lifecycle and Override Methods

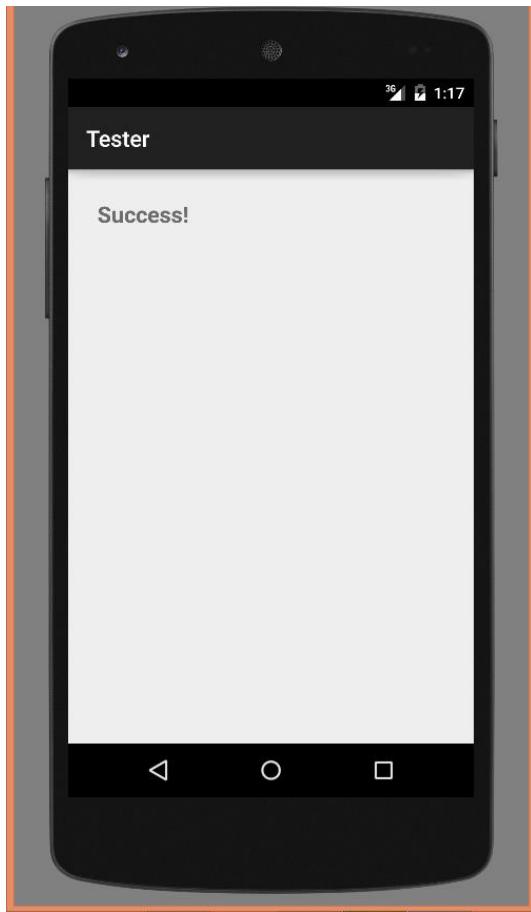

```
public class MainActivity extends ActionBarActivity {  
    // Press ALT + INSERT key and select Override Methods to construct Method code  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_main);  
    }  
  
    @Override  
    protected void onStart() {  
        super.onStart();  
    }  
  
    @Override  
    protected void onPause() {  
        super.onPause();  
    }  
}
```

## **Exporting your APP – \*.apk files**

Download the apk files and use the following password to open source code in Android Studio

KeyStore and Key Passwords respectively for apk files : ***csn1234*** and ***csn12345***

## Tester App

### *activity\_test.xml*

```
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools" android:layout_width="match_parent"
    android:layout_height="match_parent" android:paddingLeft="@dimen/activity_horizontal_margin"
    android:paddingRight="@dimen/activity_horizontal_margin"
    android:paddingTop="@dimen/activity_vertical_margin"
    android:paddingBottom="@dimen/activity_vertical_margin" tools:context=".TestActivity">

    <TextView
        android:id="@+id/messageTextView"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="@string/hello_world"
        android:padding="10dp"
        android:textSize="20sp"
        android:textStyle="bold"
        tools:context=".TestActivity" />
```

```
</RelativeLayout>
```

---

### **TestActivity.java**

```
package com.raymundoconnor.tester;

import android.support.v7.app.ActionBarActivity;
import android.os.Bundle;
import android.view.Menu;
import android.view.MenuItem;
import android.widget.TextView;

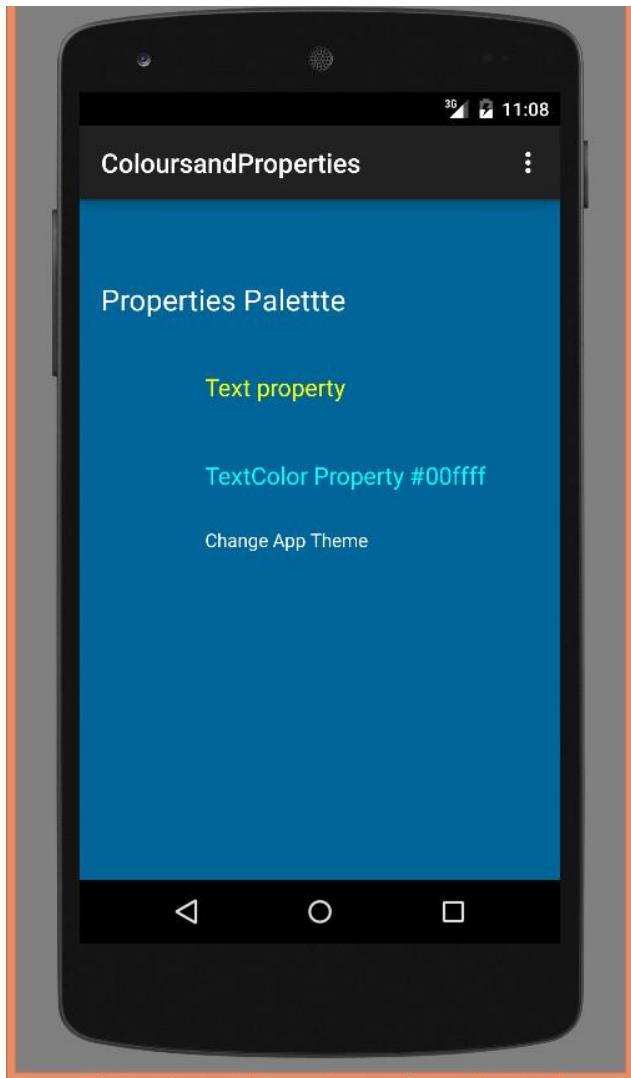

public class TestActivity extends ActionBarActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_test);

        TextView message = (TextView) findViewById(R.id.messageTextView);
        message.setText("Success!");
    }
}
```

## Widgets and Properties – ColoursandProperties app

Drag widgets onto Layout and change properties (eg ID, Text, TextColor, ..) in the properties palette as shown.

```
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools" android:layout_width="match_parent"
    android:layout_height="match_parent" android:paddingLeft="@dimen/activity_horizontal_margin"
    android:paddingRight="@dimen/activity_horizontal_margin"
    android:paddingTop="@dimen/activity_vertical_margin"
    android:paddingBottom="@dimen/activity_vertical_margin" tools:context=".MainActivity"
    android:background="#006699"

>

<TextView
    android:layout_width="wrap_content"
```

```
    android:layout_height="wrap_content"
    android:textAppearance="?android:attr/textAppearanceLarge"
    android:text="Properties Palettte"
    android:id="@+id/textView"
    android:layout_alignParentTop="true"
    android:layout_alignParentLeft="true"
    android:layout_alignParentStart="true"
    android:layout_marginTop="44dp"
    android:textColor="#ffffff" />
```

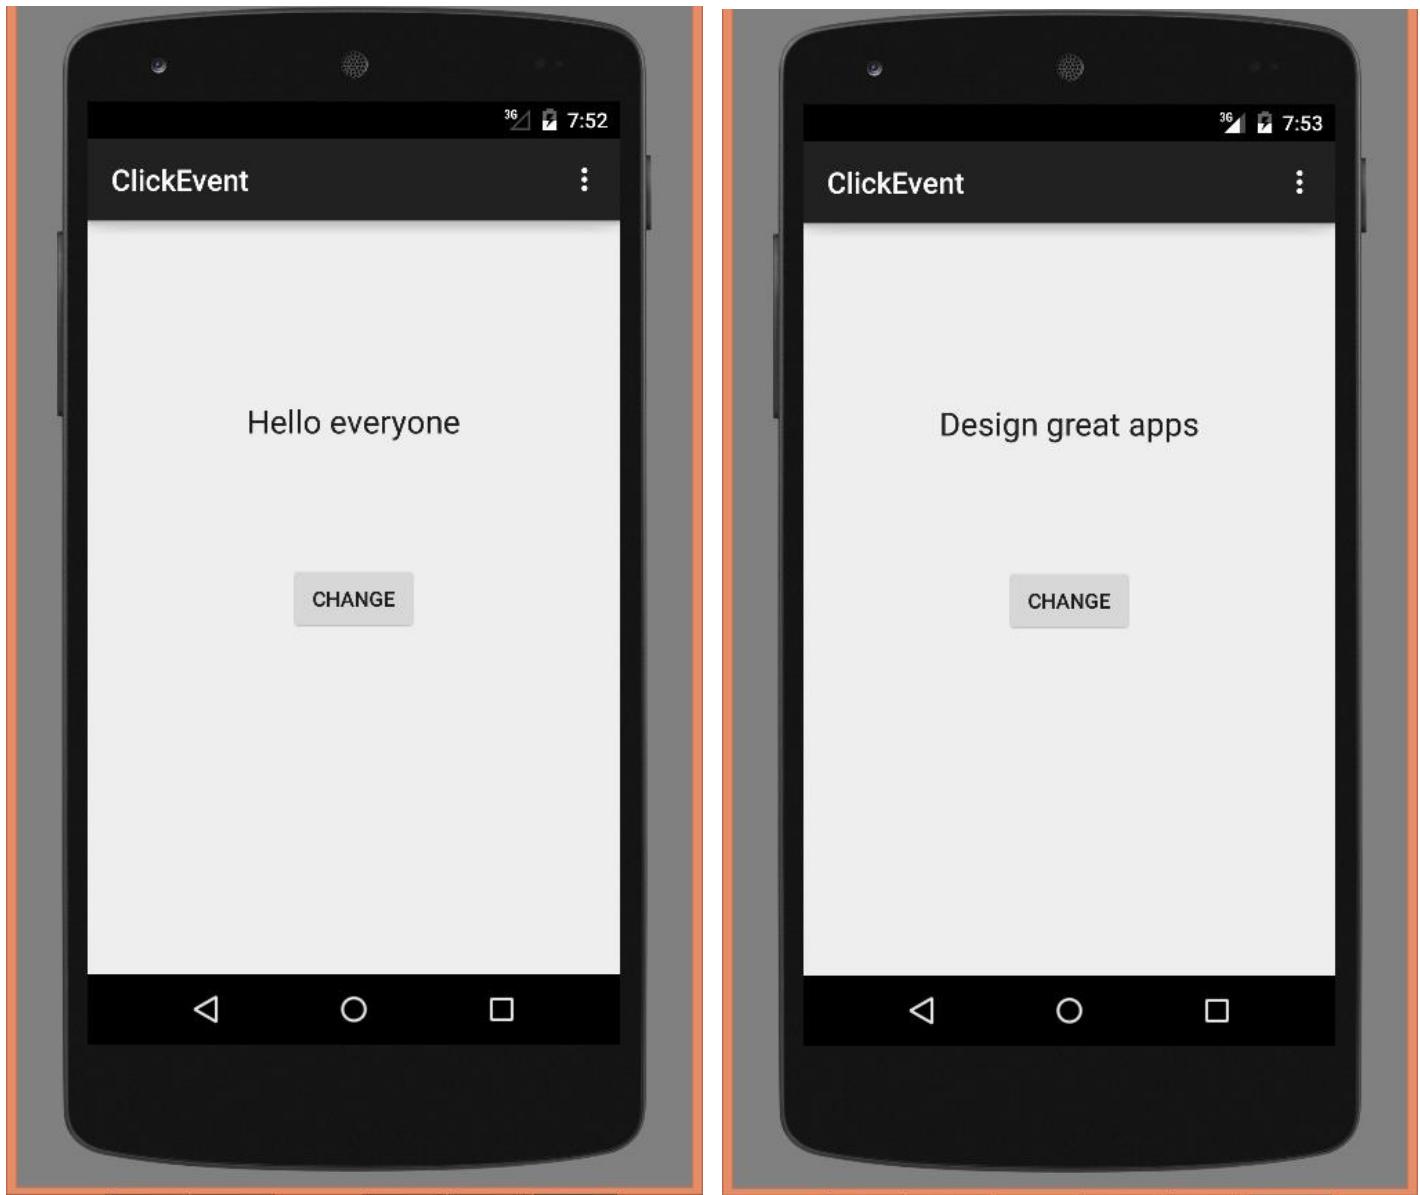

```
<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:textAppearance="?android:attr/textAppearanceMedium"
    android:text="Text property"
    android:id="@+id/textView2"
    android:textColor="#ffff00"
    android:layout_below="@+id/textView"
    android:layout_alignRight="@+id/textView"
    android:layout_alignEnd="@+id/textView"
    android:layout_marginTop="39dp" />
```

```
<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:textAppearance="?android:attr/textAppearanceMedium"
    android:text="TextColor Property #00ffff"
    android:id="@+id/textView3"
    android:layout_below="@+id/textView2"
    android:layout_alignLeft="@+id/textView2"
    android:layout_alignStart="@+id/textView2"
```

```
    android:layout_marginTop="42dp"
    android:textColor="#00ffff" />

<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:textAppearance="?android:attr/textAppearanceSmall"
    android:text="Change App Theme"
    android:id="@+id/textView4"
    android:layout_centerVertical="true"
    android:layout_alignLeft="@+id/textView3"
    android:layout_alignStart="@+id/textView3"
    android:textColor="#ffffffff" />
</RelativeLayout>
```

## ClickEvent

```
public class MainActivity extends ActionBarActivity {  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_main);  
  
        Button buttonLabel = (Button)findViewById(R.id.buttonLabel);  
  
        buttonLabel.setOnClickListener(  
            new Button.OnClickListener(){  
                public void onClick(View v){  
                    TextView TextviewLabel = (TextView) findViewById(R.id.TextviewLabel);  
                    TextviewLabel.setText("Design great apps");  
                }  
            }  
        );  
    }  
}
```
