

Visual Basic - Javascript

Visual Basic is a computer programming language whereas JavaScript is better described as a Scripting Language as it is not compiled alone and runs usually in another application. For example Javascript on a web page runs in a web browser.

Sample Code in Visual Basic

```
Dim dupes As HTMLElement = WebBrowser1.Document.GetElementById("duplicates")
If dupes Is Nothing OrElse dupes.InnerHtml.Length <> 265 Then
    MessageBox.Show("False (isDupe)", "Dupes", MessageBoxButtons.OK,
    MessageBoxIcon.Exclamation)
Else
    MessageBox.Show("True (sNotDupe)", "Not Dupes", MessageBoxButtons.OK,
    MessageBoxIcon.Information)
End If
```

Sample Code in Javascript

```
var dupes = document.getElementById("duplicates");
if (dupes == null || dupes.innerHTML.length != 265) {
    /* Code to execute when we don't want to add the place */
    alert("false (isDupe)");
} else {
    /* Code to execute when we want to add the place */
    alert("true (isNotDupe)");
}
```
