## Real World Challenge - Snow

On Monday morning there was 12 cm of snow on the ground. The weather warmed up and by Tuesday morning 2 cm had melted. 2 cm more melted by Wednesday morning. This pattern continued throughout the week until no snow was left.

Create an equation and a graph to show the relationship between the day and the amount of snow on the ground.

## Solution

$$
\text { Let } x=\text { the days after Monday }
$$

Let $y=$ centimeters of snow on the ground

$$
y=12-2 x
$$

| Data |  |
| :---: | :---: |
| $\boldsymbol{x}$ | $\boldsymbol{y}$ |
| 0 | 12 |
| 1 | 10 |
| 2 | 8 |
| 3 | 6 |
| 4 | 4 |
| 5 | 2 |
| 6 | 0 |
